Example Scenario 1.....	8

Purpose of this document

This document explains the interface for data exchange of deep-sea *crossdocking* (CD) information of the *TMS Lbase* of *Berger Logistik*. All orders should be sent in *XML* format, which will be described below.

Interface overview

Communication

Crossdocking information can be sent & received as an *XML-File* via *FTP/SFTP*. To get access to our service you must provide your external IP-address, which must be unlocked at our firewall.

This document will only cover necessary fields and information for the data structure of the *XML-File*.

File Format

The file needs to be in *XML* format. You will find below an explanation of the information needed to correctly process the data exchange. Minimum requirements are in **black** below. Useful but optional tags are mentioned in *grey*.

Date and Time Format

Date and time must be send in **UTC-Format** according to **W3C standard**.

type	XML example	comment
Date	<start>YYYY-MM-DD Z </start>	ie. 2020-11-31 (UTC)
Time	<start>hh:mm:ss Z </start>	ie. 12:59:44 (UTC)
TimeDate	<start>YYYY-MM-DDThh:mm:ss Z </start>	ie. 2020-11-31T12:59:44 Z (UTC) or ie. 2020-11-31T12:59:44+02:00(UTC)

Digital document Types

Only *Base64 coded PDFs* documents, which are included as a data stream in an *XML-Messages*, will be processed.

Record Description for Data Exchange Berger Logistik Crossdocking

05/2021

Exchange of message overview

Message time interval

Outbound messages will be sent after planning is done and plan dates / times are available.

First message from crossdocking partner must be sent before scanning starts, as some relevant information for the scanning process is contained (arrival of truck / rail, quay number, container number).

Possible error responses (container in use, container not valid, generic error) as answer to inbound messages will be sent automatically.

Message-Type "AVISO" (Message #1/#2/#6)

The AVISO-Message (*advice*) will be sent after planning of the transport. In case of changes, updates will be sent. The message contains information about planned arrival at certain locations (relevant for planning at crossdocking partner), address information of locations, Berger / Red Bull references, information about leg (pre [PLP] or main [MLP]) and article:

XML-Tag	Value example	Occurrence	Explanation
Message		1	XML-Tag starting the message
Header		1	Message header
Sender	10004	1	Unique ID of the sender
DocDat	Date (in format YYYYMMDDHH24mmss)	1	Date of message
DocNum	BL-12345678	1	Unique ID of the document (this number will change for every file that is sent)
STATUS	N/U/C	1	Message Status (N=new / U=update / C=cancel)
Body		1	XML-Tag starting shipment info
SeaShipment		1	XML-Tag starting sea-shipment info
SeefrachtID	BL-854966-BL-1	1	Unique ID of sea-shipment
NUMBER_OF_CONTAINER	3	1	Number of containers
PALLETS	60	1	Number of pallets
C_TYP	40B	1	Type of container
CARRIER	CMA CGM Deutschland GmbH	1	Name of carrier
CTR_PICK_UP_REF	MUC0160006-0002	1	Container Pick-Up Reference
CTR_DEPOT	RHE TERMINAL	1	Container Depot Name
RELEASE_DATE	2020-10-12 00:00:00.0	1	Release date
CD_PLANED_BEGIN	2020-10-13 08:00:00.0	1	Planned begin cross docking
CD_PLANED_END	2020-10-13 15:00:00.0	1	Planned end cross docking
EARLIEST_GATE_IN	2020-10-15 08:00:00.0	1	Earliest date at gate in
CLOSING	2020-10-20 17:30:00.0	1	Closing date
ETD	2020-10-23 00:00:00.0	1	Estimated time of departure
CTR_DELIVERY_REF	MUC0160006	1	Container delivery reference
POL_TERMINAL	V.T.E. (Voltri Terminal Europa)	1	Port of Loading - Terminal
POL	ITGOA	1	Port of Loading
VESSEL	CHICAGO EXPRESS	1	Ship name
VOYAGE	'0MR6XW1MA	1	Ship voyage number
POD	USMIA	1	Port of Departure
TRANSPORT_MODE	MH /CH	1	Transport of full container (MH=merchant haulage / CH=carrier haulage)
CD_REFERENCE	12345678	1	Cross docking reference
MLP_CTR_RAIL	3	1	Number of containers on RAIL (MLP)
MLP_CTR_TRUCK	0	1	Number of containers on TRUCK (MLP)
HANDELSEINHEIT_CAN	3	1	Number of CAN
HANDELSEINHEIT_BOT	0	1	Number of BOT
